

A new approach to supporting dementia therapy and care of the elderly

Award winning activities software

- Supporting care in formal care
- Low cost, easy setup, no install or training
- ... Simply the newest thing in care

A new approach to supporting dementia therapy and care of the elderly

What is RemindMeCare?

It's *not* care planning software; which records and uses data to assist care.

It's activity based software that engages the person using music, video and images to build ever expanding knowledge enabling improved person centred care.

RemindMeCare is unique ... and very, very cost effective

Addressing critical care needs ...

- Care suited to individual needs and personal profile, i.e. sex, age, religion
- Life history, relationships, likes and dislikes written into the care plan
- Personally suited and productive activities undertaken regularly

Source: *Dementia; supporting people with dementia and their carers – NICE guidelines*

Formal carers often have little information about those they look after. They're under time pressure and are rarely trained to address the causes of challenging behaviour. Knowledge of Life Story better equips them to deliver person centred care. By building a profile on an ongoing basis through activities, family participation, reminiscence and CST, RemindMeCare transforms care givers into better informed and more confident care providers.

Administrators need bespoke care strategies and family engagement, support for hard pressed activity coordinators, digital recording and automated reporting. *RemindMeCare* addresses these needs in a unique and remarkably low cost manner.

RemindMeCare helps you be outstanding ... for just £35/week (av. cost)
